BoreMeister L/D = 9 has the same performance as regular L/D = 5 tool with excellent surface quality and precision

Dedicated sleeve for anti-vibration effect enhancement

To maximize anti-vibration capability of BoreMeister, holder clamping stability must be taken into consideration. The use of split sleeve is recommended which can provide a full grip on the cylindrical shank with maximum gripping contact. Do not use a screw clamping method as it may cause damage to the holder and impede anti-vibration capability.

Clamping method

Direct screw clamping with split sleeve

Side screw clamping unit
